PROFESSIONAL SUMMARY

Full-stack Software Engineer with expertise in building enterprise applications using Java, Spring Boot, and React. Specialized in REST API development, secure authentication, scalable backend systems, and cloud-ready applications. Passionate about building clean, efficient, and production-ready software.

TECHNICAL SKILLS

Programming Languages:	Java, JavaScript
Frontend:	React, HTML5, CSS3, Tailwind CSS
Backend:	Spring Boot, Node.js, Express.js, Hibernate, REST APIs
Security:	JWT Authentication, Spring Security, RBAC
Databases:	MySQL, MongoDB
Tools:	Git, GitHub, Docker, Maven, AWS, VS Code
Core CS:	DBMS, Operating Systems, Computer Networks, Software Engineering

FEATURED PROJECTS

SubTrack AI

Enterprise SaaS Intelligence Platform

Java 21 | Spring Boot | React | MySQL | Docker

- Engineered a multi-tenant enterprise SaaS platform for managing subscriptions, vendors, budgets, and contracts with real-time analytics dashboards.
- Implemented JWT authentication and role-based access control (RBAC) using Spring Security, supporting 8+ distinct user authorization roles.
- Designed relational database schemas in MySQL with optimized object-relational mapping and data persistence via Hibernate.
- Containerized application services using Docker to establish reproducible local development and seamless deployment workflows.

ClubIQ Bayern

Football Club Intelligence Platform

Java 21 | Spring Boot | React | Sportmonks API | MySQL | Docker

- Engineered a full-stack platform for player scouting, transfer market analysis, and squad planning with real-time data synchronization across 2,000+ player profiles.
- Integrated Sportmonks REST API with a custom data transformation layer, synchronizing real-time player statistics, transfer data, and performance metrics.
- Implemented secure JWT-based access control with session management for sensitive player and club intelligence data protection.
- Containerized backend microservices and frontend web clients using Docker for environment consistency and scalability.

CampusOS

University Management Platform

MongoDB | Express.js | React | Node.js | JWT | Tailwind CSS

- Engineered a full-stack university management platform with 23 domain modules spanning students, faculty, attendance, timetables, exams, and placements across a layered Node.js architecture.
- Implemented JWT authentication with refresh token rotation, bcrypt password hashing, account lockout, and permission-scoped RBAC middleware enforcing role-level access.
- Secured REST APIs with production-grade middleware including Helmet, CORS policies, rate limiting, Gzip compression, and Winston request logging.
- Modeled flexible NoSQL document schemas in MongoDB using Mongoose for high-performance query execution and database consistency.

EDUCATION

B.Tech in Computer Science and Information Technology	— MLR Institute of Technology	Expected Graduation: 2027
Intermediate (MPC)	— Chaitanya Junior College	2021 – 2023
Secondary School (SSC)	— Gowtham Model School	2011 – 2021
